```

NOTE: For sudo use --become

//user creation

```
ansible -b -m user -a "name=support" webserver
```

// creation of file

```
ansible -m shell -a 'touch /home/ec2-user/devops.txt' webserver
```

```
ansible -m shell -a 'touch /home/ec2-user/devops-owner.txt' -b --become-user=support  
webserver
```

// yum

```
ansible -m yum -a 'name=wget state=present' webserver
```

```
ansible webserver -m yum -a "name=httpd state=latest" --become
```

```
ansible webserver -m yum -a "name=httpd* state=absent" --become
```

// managing the service

```
ansible -m service -a 'name=httpd state=started' -b all
```

```
ansible -m service -a 'name=httpd state=stopped' -b webserver
```

//Copy File

```
ansible -m copy -a 'src=/home/ec2-user/sample_file.txt dest=/home/ec2-user' all
```

//Delete File

```
ansible all -m file -a 'dest=/home/ec2-user/sample_file.txt state=absent'
```

### Listing all the modules

```
ansible-doc -l
```

// listing specific modules

```
ansible-doc copy
```

```
ansible-doc file
```
